1 Economic Impact of state investment: A comparative Analysis of Montgomery & Prince George's counties (2014-2024)
2 Data Sources & Wrangling
3 EDA Status: Funding Distribution
4 EDA Status: Wage Trends & Correlation
5 EDA Implications & Research Support
6 Next Steps

EDA Status: Funding Distribution

$ 🏛 €

Interesting Result: Identifying a specific year (likely 2020 or 2021) where one county saw a massive spike in funding compared to the other.

Interpretation: State funding isn't distributed equally; it's reactive to policy changes or economic crises.

Note: In my exploratory analysis, I found that funding levels are highly volatile. As I was Coding and doing my research I could see in 2019 that Montgomery County received a massive influx of cash. This is a critical baseline for my project because it allows me to see if that specific 'funding shock' created a visible bump in the local wage trend in the following years.
